1

• (8)

$$\begin{aligned}\lim_{x \rightarrow a} \frac{\sin^2(x) - \sin^2(a)}{x - a} &= \lim_{x \rightarrow a} \frac{[\sin(x) - \sin(a)][\sin(x) + \sin(a)]}{x - a} \\&= \lim_{x \rightarrow a} \frac{2\cos(\frac{x+a}{2})\sin(\frac{x-a}{2})[\sin(x) + \sin(a)]}{x - a} \\&= \lim_{x \rightarrow a} [\sin(x) + \sin(a)]\cos(\frac{x+a}{2})\frac{\sin(\frac{x-a}{2})}{\frac{x-a}{2}} \\&= 2\sin(a) \cdot \cos(a) \cdot 1 \\&= \sin(2a)\end{aligned}$$

2

• (4)

$$\begin{aligned}\lim_{x \rightarrow 0} \left(\frac{1+x}{1-x} \right)^{\frac{1}{x}} &= \lim_{x \rightarrow 0} \left(1 + \frac{2x}{1-x} \right)^{\frac{1}{x}} \\&= \lim_{x \rightarrow 0} \left(1 + \frac{2x}{1-x} \right)^{\frac{1-x}{2x} \cdot \frac{2x}{x(1-x)}}\end{aligned}$$

令 $t = \frac{2x}{1-x}$, 则 $x \rightarrow 0, t \rightarrow 0$, 所以

$$\lim_{x \rightarrow 0} \left(1 + \frac{2x}{1-x} \right)^{\frac{1-x}{2x}} = e$$

$$\lim_{x \rightarrow 0} \frac{2x}{x(1-x)} = 2$$

利用 P80 例 1 可得:

$$\lim_{x \rightarrow 0} \left(1 + \frac{2x}{1-x} \right)^{\frac{1-x}{2x} \cdot \frac{2x}{x(1-x)}} = e^2$$

3

说明 1. 这种极限套极限的格式, 按照运算的优先级进行计算。本题中, 先计算大括号里的极限, 把其中的 x 看做定值。

我们有

$$\begin{aligned} \sin x &= 2 \cos \frac{x}{2} \sin \frac{x}{2} \\ &= \dots \\ &= 2^n \cos \frac{x}{2} \cos \frac{x}{2^2} \dots \cos \frac{x}{2^n} \sin \frac{x}{2^n} \end{aligned}$$

于是,

$$\begin{aligned} \lim_{n \rightarrow \infty} \cos x \cos \frac{x}{2} + \dots + \cos \frac{x}{2^n} &= \lim_{n \rightarrow \infty} \frac{\cos x \sin x}{2^n \sin \frac{x}{2^n}} \\ &= \lim_{n \rightarrow \infty} \frac{\cos x \sin x}{x} \frac{\frac{x}{2^n}}{\sin \frac{x}{2^n}} \\ &= \frac{\cos x \sin x}{x} \cdot 1 \\ &= \frac{\cos x \sin x}{x} \end{aligned}$$

所以

$$\lim_{x \rightarrow 0} \frac{\cos x \sin x}{x} = 1$$
